Art Unit: 3654

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim1-32 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is not clear how the side shields are movable between the closed and open configurations. It is not clear what kind of force is required and how the force is to be applied.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the subject matter of claim 6 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claims 1-32 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

While applicant may be his or her own lexicographer, a term in a claim may not be given a meaning repugnant to the usual meaning of that term. See *In re Hill*, 161

F.2d 367, 73 USPQ 482 (CCPA 1947). The term "concave" having the accepted meaning : "hollow and curved like the inside half of a hollow ball" (Webster's New World Dictionary, Third College Edition) is being used in claims 1-32 to describe an object that does not fit that definition. Similarly with the term "convex". Appropriate correction is required.

All claims should be revised carefully to correct all other deficiencies similar to the ones noted above.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bishop (US 474518). That the side shields AA are concave in shape would have been an obvious matter of design choice to a person having ordinary skill in the art based on factors such as ornamental preference and design criteria. It should be noted that the shields AA can be removed from the core and positioned with the outside walls facing the roll therefore forming a convex shape facing the roll. It is deemed that there is friction between the plugs B and the core C (as opposed to being frictionless) therefore forming a "friction fit". All the pieces are attached together as shown in the figures. Adhesive tape would have been an obvious choice of material to be used in conjunction with the apparatus.
